

Changing the Army Risk Reduction Program

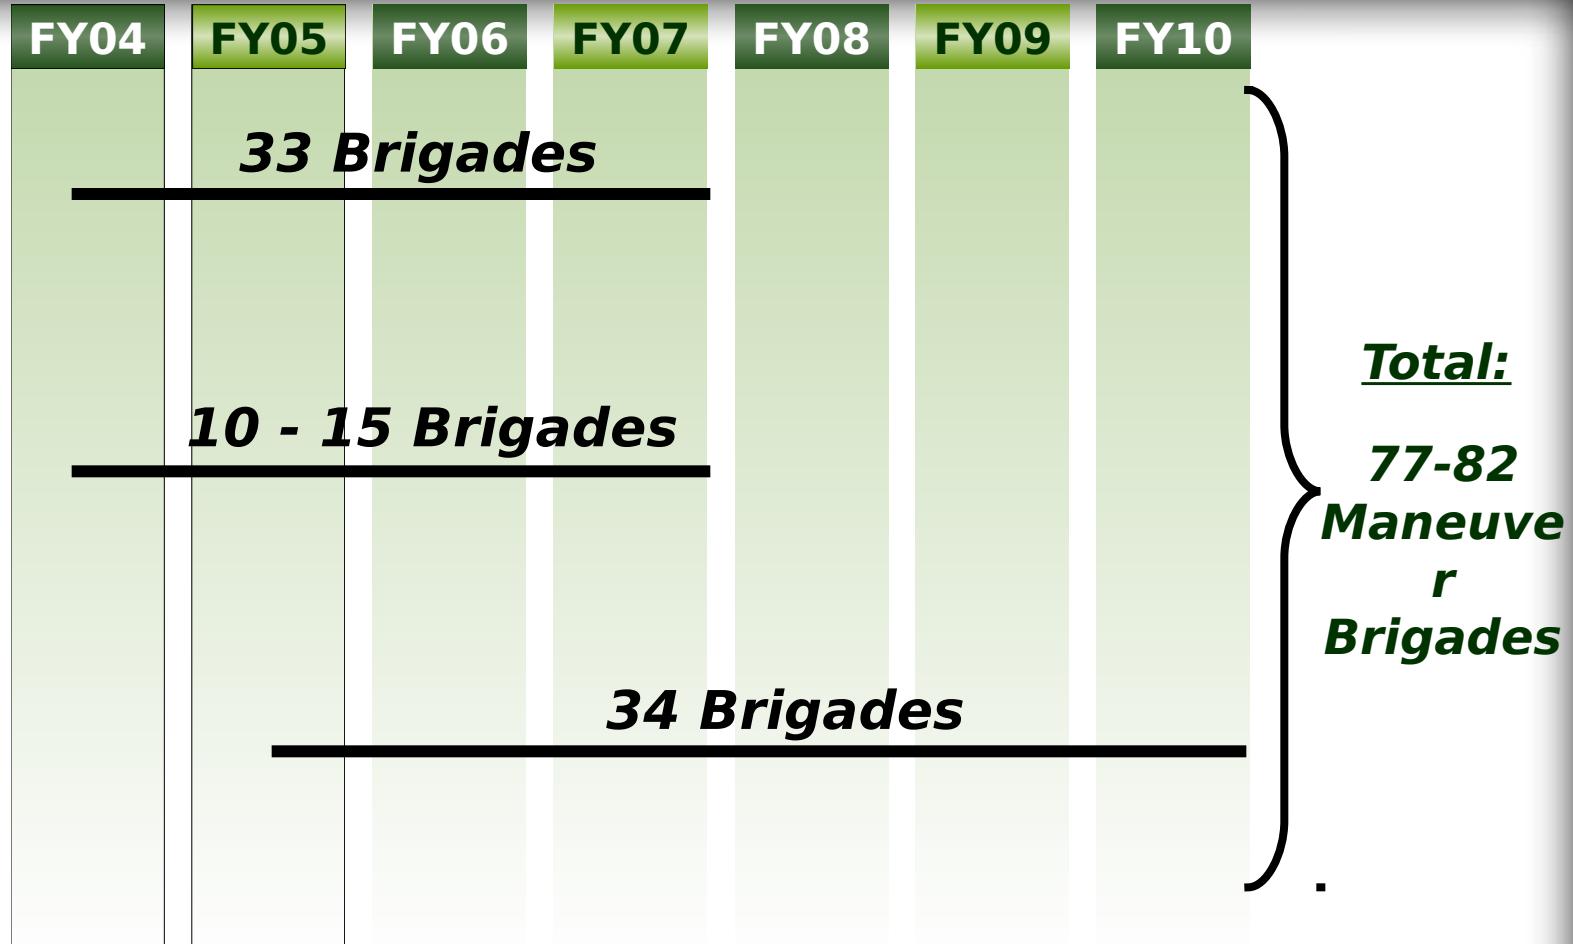

Future of the Army

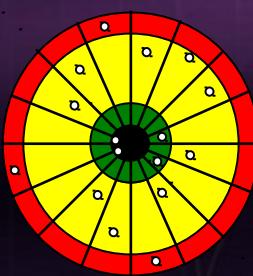

Active Component Reorganize

Active Component Build

Reserve Component Reorganize

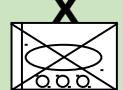

Common organizational designs for Active and Reserve

With Brigades as Building Blocks

(Less than 4,000 Soldiers in each Brigade)

| | | | |
|---|---|---|--|
|  Infantry |  Heavy |  Stryker |  FCS Future |
|---|---|---|--|

Standard maneuver brigades with organic combined arms capabilities

| | | | | |
|--|--|---|---|---|
|  Maneuver Enhancement |  Reconnaissance, Surveillance, Target Acquisition |  Aviation |  Fires |  Sustainment |
|--|--|---|---|---|

Supporting brigades with standard headquarters, but variable subordinate units

The Changing Army Today

- ✓ Units not tied to division base.
- ✓ Brigades changing to better meet Commanders' requirements

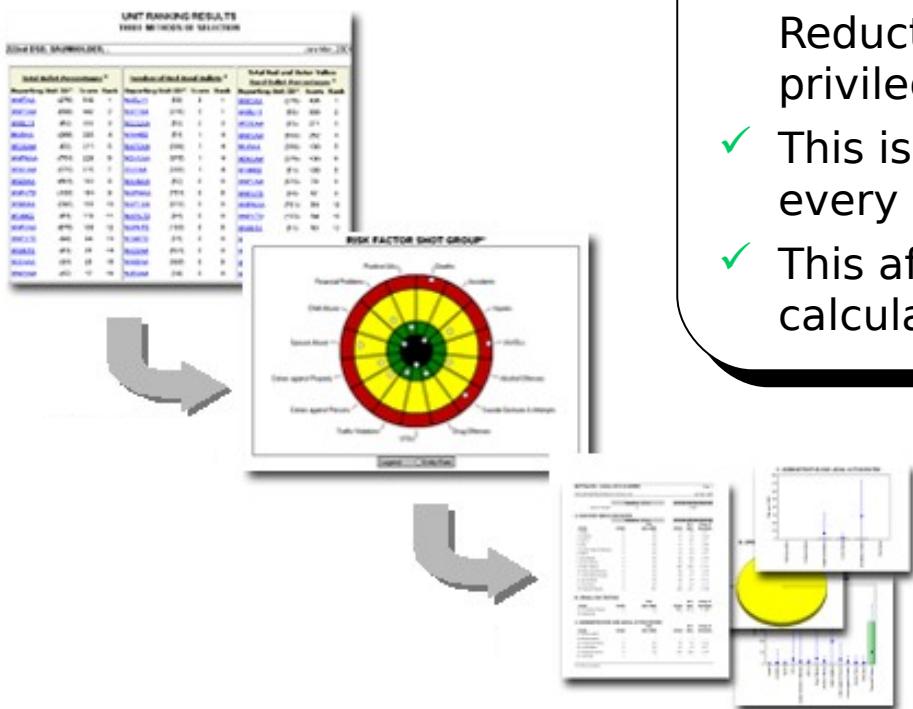

- ✓ Risk Reduction needs to produce reports at company, battalion & brigade levels to better reflect the new Army modularity
- ✓ Create more Aggregate Reporting Groups (ARGs) to leverage current system functionality

From Division to Brigade - Centric

Changing RRP

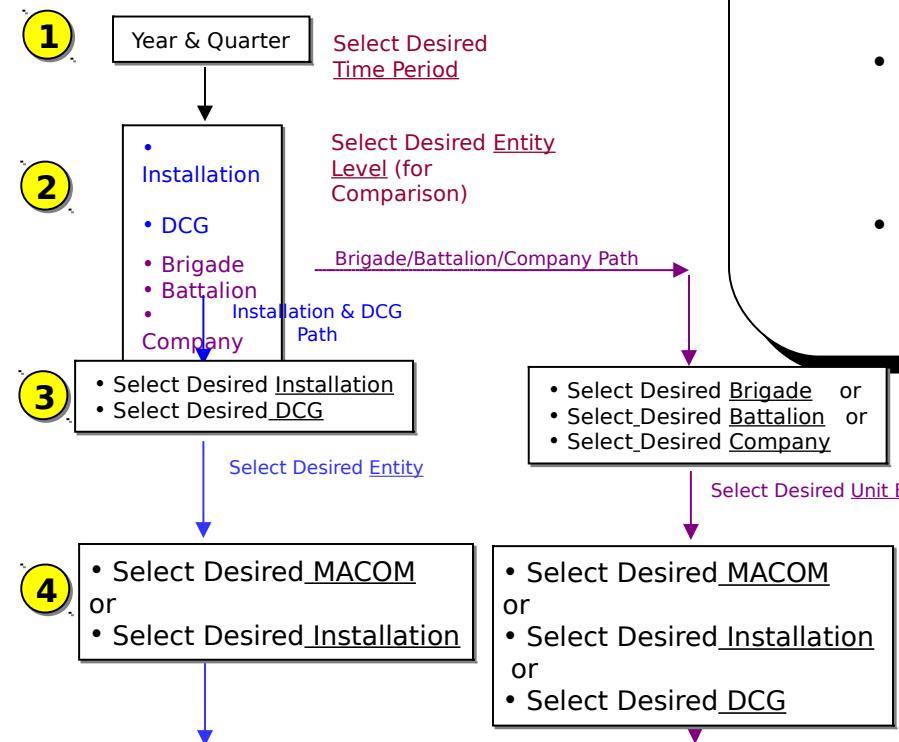

- ✓ We are currently updating the Risk Reduction reports and user rights & privileges
- ✓ This is a major undertaking that updates every report in the system
- ✓ This affects the way some reports are calculated

From Division to Brigade - Centric

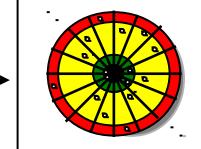

Report Generation

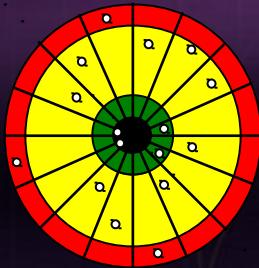

✓ **Report Wizard Redesign** – To accommodate the new Army modularity (brigades/Units of Action) there will have to be new wizard development.

- In the old reporting system there were only reporting units and parent units. The system rendered a report if you were a reporting unit or a rollup if you were a parent unit.
- In the new system reports (i.e. shot group, trend line, etc) will be generated for parent units (i.e. brigades & battalions) as well as reporting units.

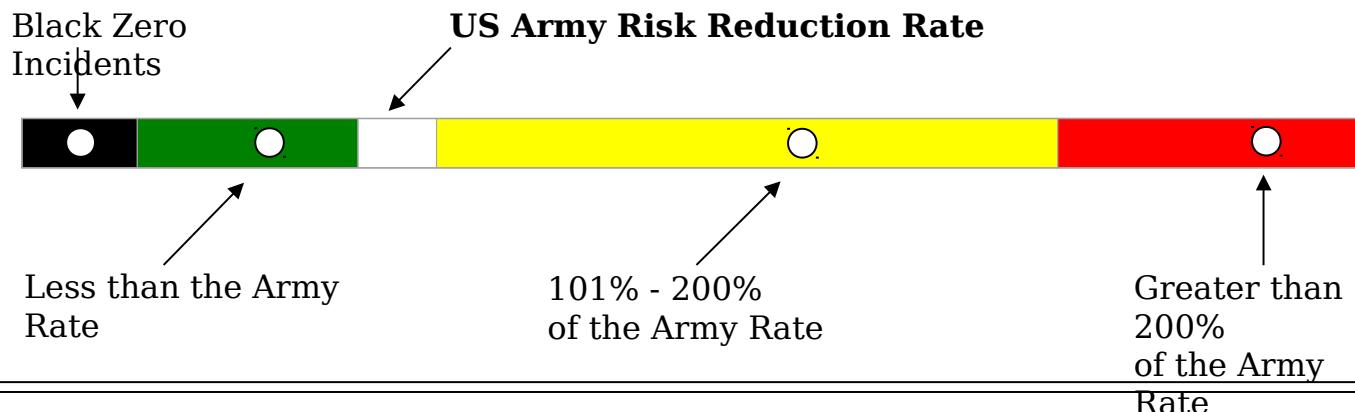

Shot Group Rpt

How the Shot Group Changes

Each risk factor slice will show one of the following bullet placements:

Each risk factor slice will also show a comparison icon:

Legend: Entity Rate Army Rate

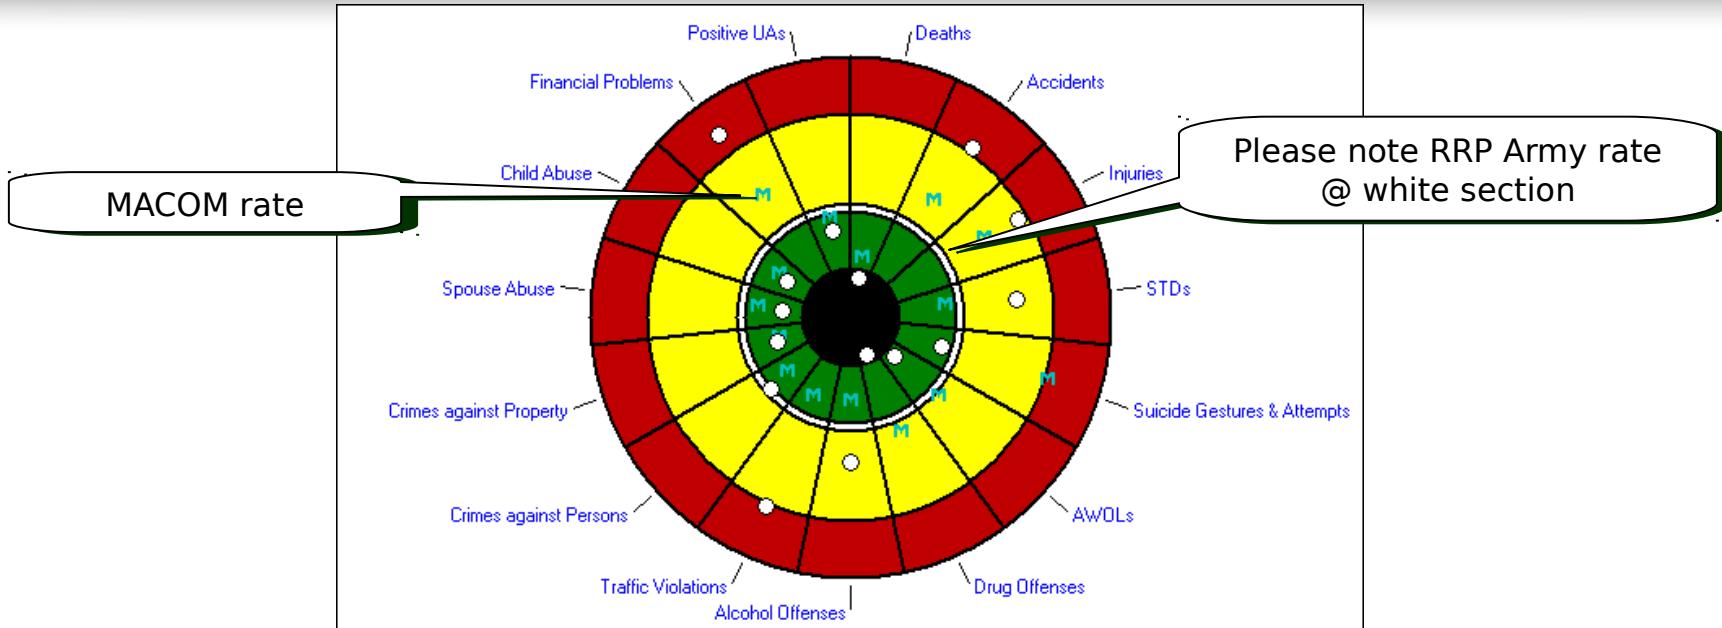

Army rate replaced

Shot Group Redesign

Shot Group Redesign

| <u>COLOR BAND</u> | <u>DESIGNATION</u> | <u>RATE**</u> |
|-------------------|--------------------|-----------------------------|
| | DANGER ZONE | Greater than 200% Army rate |
| | CAUTION ZONE | 101% - 200% Army rate |
| | RRP ARMY RATE | US Army RRP rate |
| | SAFETY ZONE | Less than Army rate |
| | BULLSEYE | Black Zero Incidents |

* "Bullet holes" are displayed only for risk factor for which data were reported.

** The rate is computed as the entity rate divided by the maximum rate for the group multiplied by 100.

Unit Ranking Report

- ✓ The Unit Ranking Report will have two columns instead of three
 1. Number of Red Band Bullets
 2. Total Percentages over RRP Army rate

| Total Bullet Percentages ¹ | | | Number of Red Band Bullets ² | | | Total Red and Outer Amber Band Bullet Percentages ³ | | | | | |

New

Summary Reports

- ✓ The Summary Report will reflect the correct type of group Company, Battalion, Brigade, Data Collection Group, Installation or MACOM.
- ✓ Since we will no longer compare the unit against the unit with the highest rate within the comparison group. The last column will become the Army rate for each risk factor.

Correct naming convention

New

Army rates for each factor

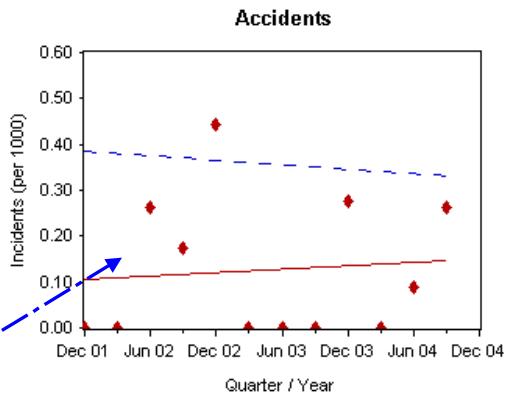

TRADOC Matrix Report

MACOM-Level TRADOC users can see how the rates of a desired Comparison Group (Permanent Party Soldiers, Students, or Trainees) within each installation compare with the overall Army rates.

| Risk Factors | Army | Carlisle Barracks | Fort Benning | Fort Bliss | Fort Gordon | Fort Huachuca |
|--------------|------|-------------------|--------------|------------|-------------|---------------|
| Deaths | 2.6 | 0.8 | 2.7 | 3.4 | 1.5 | 0.0 |
| Accidents | 1.3 | 2.4 | 1.4 | 0.8 | 1.0 | 3.0 |
| Injuries | 2.1 | 1.8 | 4.0 | 2.0 | 1.4 | 1.7 |
| STDs | 1.2 | 0.7 | 1.3 | 1.8 | 0.9 | 1.0 |
| AWOLs | 1.6 | 1.7 | 2.8 | 0.1 | 0.3 | 0.5 |

Background Color Legend

Green - Anything equal to the RRP Army Rate or below

Amber - Anything over to the RRP Army Rate - up to 200%

Red - Anything over 200% of the RRP Army Rate

TRADOC wanted a specialized report that Risk Reduction did not offer. In the development process for TRADOC we were able to leverage the reporting functionality for the entire Army.

Unit Level Matrix Report

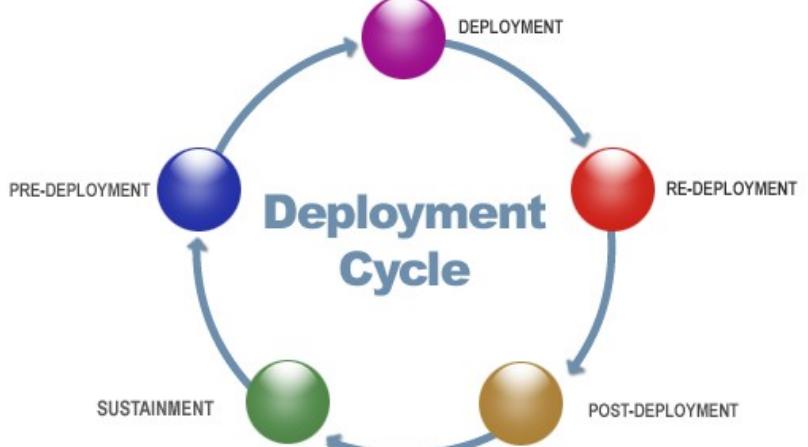

The Matrix Report allows the user to easily identify possible high risk areas within units.

| RISK FACTORS | ARMY | MACO M | MACO M | 1-1 EN BN | 2-1 EN BN | 1-21 INF BN | 355th MP BN | 12th CM BN | 11 AVN BN | 42nd QM BN |

Reintegration URI

The Reintegration Unit Risk Inventory has been used effectively by some installations to predict high-risk behaviors. Still the participation has not been meeting the projections. As part of the DCS-CON Plan each returning unit should be completing an R-URI. One more thing about the R-URI, the forms and reports are free.

Page 1 of 2

Intervention Knowledgebase

Risk Reduction Intervention Knowledgebase

- ◆ [Welcome](#)
- ◆ [Contacts](#)
- ◆ [Content](#)
- ◆ [Exit](#)

Welcome Mr. Carson Phillips

ACSAM recognizes the importance of providing Risk Reduction users (across the Army enterprise) with a centralized repository where contact resource information, prevention information/content, and educational material can be gathered, incorporated, organized, accessed, viewed, and downloaded by remote users via the web.

In an effort to maximize information sharing, the web-based Risk Reduction System provides a centralized "Knowledgebase" feature enabling (pre-defined) users to enter and/or upload desired information, content, and material into a central repository.

Knowledgebase information is visible to system users based on their respective user access levels. This central repository is designed to provide remote users with installation-level points of contact for each system risk factor. It also intends to offer prevention information/content and educational materials as remote system users and commanders continue to strive in decreasing soldier high-risk behavior.

- ✓ Each risk factor only takes a minute to setup contact email and phone #
- ✓ Check your user account to make sure you can edit the knowledgebase
- ✓ Contact ACSAP for Help

- ✓ The Intervention Knowledgebase went live last year after the Austin Conference.
- ✓ ACSAP has populated data for each high-risk behavior.
- ✓ Every Installation should be taking advantage of this delivery vehicle by inputting at least one contact per risk factor at installation level.
